

Overview of the Position Responsibilities: Our Project Manager - Market Expansion will manage a variety of internal and external stakeholders to shepherd the construction and progress for several regional expansion markets. Your vital role will ensure that these multi-stakeholder, complex markets are delivered on time, to specifications, and within budget. If this sounds exciting, please read on.

Be part of our innovation- building and delivering a fiber-rich internet connection to people's doorsteps.

What You Will Do:

- Collaborate with stakeholders to establish project scope and identify and coordinate deliverables, timelines, and budgets
- Publish accurate information on all market level construction activities to help ensure the team is meeting deadlines, working within budget
- Develop and maintain detailed schedules for multiple construction expansion markets, actively managing stakeholders and driving the scheduled tasks; Monitor equipment ordering/logistics processes to insure expansion market readiness
- Analyze implications of changes from the original schedule and identify required corrective actions to ensure the expansion market delivery schedule stays on track
- Ensure data integrity and identify process or metric improvement opportunities
- Identify process limitations and collaborate with stakeholders and vendors to identify and implement time and/or cost-efficiency improvements
- Ensure accurate reporting and forecasting of project timelines, resources, and capital; Accountable for communicating the markets' status to the Chief Business Development Officer's management team. Daily and weekly reporting on project milestones and updates
- For PM's dedicated to process development they will map the process for the fiber construction and expansion market delivery process; Apply process improvement methodologies to map existing processes and dependencies, identify critical paths and milestones, and implement process improvements to integrate stakeholders and streamline the expansion market delivery process

What You Will Need:

- Bachelor's Degree in construction management, engineering or related field and 5 + years of experience with project management and/or an equivalent combination of education and experience; experience in the telecommunications/fiber optic industry preferred.
- Upon job offer, must be able to pass a background check and drug test prior to starting employment
- Project Manager Professional certification preferred
- Experience with budget tracking, cost estimation, and cost accounting of capital plans
- Knowledgeable in industry specifications and fiber network builds; Knowledge and understanding of outside plant fiber optic network infrastructures
- Strong written and oral communication skills, including the ability to present ideas and suggestions clearly and effectively
- Adept at identifying potential project roadblocks and developing mitigation strategies
- Ability to work with different functional groups and levels of employees to effectively and professionally achieve results
- Knowledge of constructability best practices and principles
- Effective time management with the ability to work independently, manage multiple tasks, set priorities and meet deadlines.
